An ENERGY STAR Heat Pump Water Heater may save you up to 50%* on water heating costs compared to running a standard electric resistance water heater.

Find out if a Heat Pump Water Heater is the right solution for your home.

According to the US Department of Energy, water heating is the third largest energy expense in your home and typically accounts for about 12% of your energy bill. There are four ways to cut your water heating bills; use less hot water, turn down the thermostat on your water heater, insulate your water heater, or buy a new, more efficient model. While the purchase of a more energy efficient model may cost more initially than a standard water heater, the energy savings will continue over the lifetime of the appliance.

For a limited time, you may qualify for a $500 incentive through your Municipal Electric Utility (MEU) if you are replacing your water heater or first generation heat pump water heater with a qualified ENERGY STAR heat pump water heater.

* Savings vary depending upon the location of the water heater and individual home usage patterns.

LOOK FOR THE ENERGY STAR.
Find it at participating retailers.
Join the national effort to be energy efficient. Buy appliances that have earned the ENERGY STAR. Only products delivering the highest level of energy efficiency are awarded the ENERGY STAR from the US Environmental Protection Agency and the US Department of Energy.
